

SUFFOSSION

Meaning: Suffossion refers to the process of soil or sediment being washed away or eroded, often leading to the formation of cavities or sinkholes beneath the surface.

1. The archaeologists discovered signs of suffossion in the ancient burial site, indicating a possible collapse of the ground above.
2. During the heavy rains, the suffossion process caused several sinkholes to form throughout the neighborhood.
3. Geologists studied the suffossion patterns in the region to better understand the underlying soil dynamics.
4. The phenomenon of suffossion can lead to significant changes in landscape and soil stability over time.
5. In certain areas, suffossion can contribute to the rapid erosion of soil, affecting agriculture and natural habitats.
