

SULPHOTUNGSTATE

Meaning: Sulphotungstate is a chemical compound containing tungsten and sulfur, often used in chemistry for its catalytic properties in various reactions.

1. The chemist carefully prepared a solution of sulphotungstate for the experiment.
2. Sulphotungstate has been found to exhibit interesting catalytic properties in organic reactions.
3. Researchers are exploring the potential applications of sulphotungstate in energy storage systems.
4. The unique structure of sulphotungstate contributes to its effectiveness as a reagent in various chemical processes.
5. In the field of nanotechnology, sulphotungstate is being studied for its role in creating novel materials.
