

SUNDEW

Meaning: Sundew is a type of carnivorous plant belonging to the genus Drosera, characterized by its sticky, glandular leaves that capture and digest insects.

1. The sundew plant traps insects using its sticky, glandular leaves.
2. In the morning light, the sundew glistened with dewdrops, resembling tiny jewels.
3. As the sun set, the sundew's bright red tentacles became even more vibrant.
4. Botanists study the sundew to understand its unique adaptation to nutrient-poor environments.
5. Sundews are often found in wetlands, thriving in the moist, acidic soil.
