

SUPERFOLIATION

Meaning: Superfoliation is the phenomenon in which layers of plant growth or geological structures develop or are altered significantly due to environmental factors such as pressure, temperature, or other conditions.

1. The phenomenon of superfoliation can significantly affect the growth patterns of certain plant species.
2. In geology, superfoliation is often observed as a result of extreme pressure and temperature changes over time.
3. Researchers are studying superfoliation to understand its implications for soil erosion in mountainous regions.
4. The artist's use of layered materials in her work evokes a sense of superfoliation, suggesting complexity beneath the surface.
5. Superfoliation in the fabric of the universe could lead to new theories in astrophysics regarding the structure of galaxies.
