

SUPERREFLECTION

Meaning: Superreflection is the phenomenon where a wave reflects off a boundary with an exceptionally high degree of coherence, often enhancing the efficiency of optical devices like mirrors.

1. Superreflection occurs when a wave reflects off a boundary with a high degree of coherence.
2. In optics, superreflection can enhance the efficiency of certain types of mirrors.
3. Researchers are exploring superreflection techniques to improve imaging systems in telescopes.
4. The phenomenon of superreflection is critical in the design of photonic devices.
5. Understanding superreflection can lead to advancements in telecommunications technology.
