SUPERSCRIPT

Meaning: Superscript is a typographical notation where a character is set slightly above the normal line of type, often used for indicating exponents or footnotes.

1. The chemical formula for water is often written as H2O, using a superscript for the number of hydrogen atoms.

2. In academic writing, it is common to use superscript for footnotes and references.

3. When typing in a word processor, you can easily format text to appear as superscript for mathematical expressions.

4. The author's name was followed by a superscript numeral indicating the corresponding citation in the bibliography.

5. Superscript is frequently used in mathematics to denote exponents, such as in the expression 2^3.
