SUPERSOLAR

Meaning: Supersolar refers to energy generation or technology that exceeds conventional solar power efficiency or output, often through innovative methods or advancements.

1. The concept of supersolar energy generation is gaining traction among renewable energy researchers.
2. Recent advancements in supersolar technology could revolutionize how we harness solar power.
3. Scientists are exploring supersolar phenomena to improve the efficiency of photovoltaic cells.
4. The company's new supersolar panel design promises to capture energy even in low-light conditions.
5. Supersolar materials have the potential to significantly reduce the cost of solar energy systems.
