

SUPPURATION

Meaning: Suppuration is the process of forming or discharging pus, typically due to infection.

1. Suppuration can occur when a wound becomes infected and the body produces pus to fight the bacteria.
2. The doctor explained that the symptoms of suppuration include swelling, redness, and a foul odor from the affected area.
3. In severe cases, suppuration may require surgical intervention to drain the infected fluid.
4. Early treatment of suppuration can help prevent further complications and promote faster healing.
5. Patients with chronic conditions may be more prone to episodes of suppuration, necessitating regular medical check-ups.
