SUPRALORAL

Meaning: Supraloral refers to the area or region located above the lores (the space between the eyes and the beak) on a bird's head, often characterized by distinctive coloration or markings.

1. The supraloral region of the bird's head often displays vibrant colors during mating season.
2. Researchers noted that the supraloral area in certain species is crucial for species identification.
3. In her study of avian anatomy, she focused on the supraloral feathers and their role in insulation.
4. The supraloral markings can vary significantly between different subspecies of the same bird.
5. Understanding the function of the supraloral structures can provide insights into avian behavior and ecology.
