

SYNCHONDROTOMY

Meaning: Synchondrotomy is a surgical procedure involving the incision of a cartilage joint, often performed to relieve pressure or improve access in medical treatments.

1. A synchondrotomy may be performed to relieve pressure on the spinal cord in certain medical cases.
2. During the surgery, the surgeon executed a synchondrotomy to facilitate better access to the affected area.
3. The patient was informed that a synchondrotomy could help correct his joint alignment issues.
4. Advancements in minimally invasive techniques have made synchondrotomy a preferred option for many orthopedic procedures.
5. After the synchondrotomy, the recovery process was closely monitored to ensure proper healing and function.
