

SYNCLINE

Meaning: A syncline is a geological structure formed by a downward fold in rock layers, resulting in a trough-like shape.

1. A syncline is a geological formation characterized by a downward-curving fold in layered rock.
2. The valley created by the syncline often becomes a rich area for collecting fossilized remains.
3. In structural geology, understanding the orientation of a syncline can help predict the location of natural resources.
4. The syncline's distinct shape can be seen in the rolling hills of the Appalachian Mountains.
5. Geologists often map synclines to study the historical shifts in the Earth's crust.
