

SYRINGOTOMY

Meaning: Syringotomy is a surgical procedure that involves creating an incision to drain or decompress a fluid-filled cavity, typically in the context of treating syringomyelia.

1. Syringotomy is often performed to relieve symptoms associated with syringomyelia.
2. The surgeon explained that a syringotomy could help reduce the size of the fluid-filled cavity.
3. After the syringotomy, the patient experienced significant improvement in pain management.
4. In cases of severe neurological symptoms, a syringotomy may be considered as a treatment option.
5. Post-operative care following a syringotomy is crucial for the patient's recovery and monitoring.
