

# TABANUS

*Meaning: Tabanus is a genus of large, bloodsucking flies commonly known as horseflies, notorious for biting livestock and causing discomfort.*

1. The tabanus is often referred to as a horsefly due to its tendency to bite livestock.
2. Farmers dread the arrival of tabanus during the summer months, as their bites can cause significant discomfort to animals.
3. In some regions, tabanus populations have surged, leading to increased concerns about their impact on cattle health.
4. Scientists study the mating habits of tabanus to better understand their role in pest management.
5. Despite their painful bites, tabanus are crucial pollinators for many wildflowers in their habitats.
