

# TACHYMETER

*Meaning: A tachymeter is an instrument used to measure the speed of a moving object, often displayed in units such as miles per hour or kilometers per hour.*

1. The scientist used a tachymeter to accurately measure the speed of the moving vehicle.
2. During the race, the driver's tachymeter displayed the instantaneous speed and helped optimize performance.
3. For surveying purposes, the team relied on a tachymeter to gather precise distance measurements.
4. The engineer explained that the tachymeter can be essential for determining elevation changes on a construction site.
5. As a crucial tool in topographic surveys, the tachymeter allows for quick and reliable data collection.
