

# TADPOLE

*Meaning: A tadpole is the larval stage of a frog, characterized by a soft, aquatic body and a tail, which eventually develops legs and undergoes metamorphosis into an adult frog.*

1. The pond was teeming with life, and we spotted several tadpoles swimming happily among the lily pads.
2. As the tadpole grows, it gradually develops legs and loses its tail, transforming into a frog.
3. Children are often fascinated by the process of watching a tadpole metamorphose into an amphibian.
4. We collected a few tadpoles in a jar to observe their development over the next few weeks.
5. In the warm spring sun, the tadpoles darted around, oblivious to the world above the water's surface.
