

TAILBLOCK

Meaning: Tailblock: a device or component used in rigging systems, such as pulleys or sailboats, that helps guide and support ropes or lines for improved performance and stability.

1. The technician replaced the worn-out tailblock to improve the performance of the pulley system.
2. The tailblock serves as a crucial component in the rigging of the sailboat, ensuring stability during navigation.
3. During the inspection, the engineer noted that the tailblock showed signs of wear and needed immediate attention.
4. Proper installation of the tailblock is essential for preventing accidents during heavy lifting operations.
5. The tailblock's innovative design allows for smoother operation and reduces friction in the system.
