TAPROOT

Meaning: A taproot is the main root of a plant that grows vertically downward and anchors the plant while storing nutrients.

1. The taproot of the carrot enables it to store nutrients deep in the soil.
2. In botany, a taproot is the primary root that grows downward and supports the plant.
3. Many trees develop a strong taproot that helps them anchor in windy conditions.
4. Gardeners often prefer plants with a taproot because they are more drought-resistant.
5. The taproot system of dandelions makes them difficult to remove from lawns.
