

TAXONOMIC

Meaning: Taxonomic refers to the science of classification, particularly in organizing and categorizing living organisms into hierarchical groups based on shared characteristics.

1. The taxonomic classification of the newly discovered species revealed surprising relationships with previously known organisms.
2. Scientists use taxonomic keys to identify and categorize various plant and animal species.
3. Understanding the taxonomic hierarchy is essential for studying biodiversity and evolutionary biology.
4. The research focused on the taxonomic distinctions between similar-looking insects in the rainforest.
5. Advancements in genetic sequencing have revolutionized traditional taxonomic methods, allowing for more accurate classifications.
