TECTONIC

Meaning: Tectonic refers to the processes and movements related to the structure and dynamics of the Earth's crust, particularly concerning the shifting of tectonic plates.

1. The tectonic plates beneath the Earth's surface constantly shift, causing earthquakes and volcanic eruptions.
2. Scientists study tectonic activity to better understand the formation of mountain ranges and ocean basins.
3. The recent tectonic activity in the region has raised concerns about potential natural disasters.
4. Understanding tectonic movements is crucial for predicting the long-term changes in our planet's geography.
5. The tectonic forces at play contribute significantly to the dynamic nature of Earth's crust.
