

TELLURETED

Meaning: 'Tellureted' refers to a compound or mineral that contains tellurium, often noted for its distinctive electrical properties and potential applications in enhancing material performance.

1. The mineral tellureted is often studied for its unique electrical properties.
2. Researchers have discovered that tellureted compounds can enhance the performance of certain alloys.
3. In recent experiments, the tellureted forms showed promising results in photovoltaic applications.
4. The tellureted phase was identified as a crucial component in the synthesis of advanced materials.
5. Understanding the behavior of tellureted substances can lead to breakthroughs in nanotechnology.
