

TENDRON

Meaning: TENDRON: A slender, stem-like structure in plants that coils or wraps around objects for support, commonly found in climbing species.

1. The tendron of the plant began to curl around the nearby trellis as it sought support.
2. In botanical studies, the tendron plays a crucial role in the growth patterns of climbing species.
3. Researchers observed that the tendron's sensitivity to light influences its directional growth.
4. During spring, the tendron emerged rapidly, entwining itself around the fence post.
5. Gardeners often prune the tendron to encourage a healthier and more compact plant structure.
