

# TERRIGENOUS

*Meaning: Terrigenous refers to sediments or materials derived from land, particularly those that are transported to the ocean by rivers, wind, or erosion.*

1. The terrigenous sediments found in the ocean floor provide valuable insights into ancient geological processes.
2. Marine biologists often study terrigenous inputs to understand their impact on coastal ecosystems.
3. Terrigenous materials can significantly influence the chemical composition of seawater in estuarine environments.
4. The research focused on the distribution of terrigenous debris in the Arctic Ocean's sediment layers.
5. Terrestrial erosion contributes to the accumulation of terrigenous particles in river deltas.
