TETRAPOD

Meaning: Tetrapod: a vertebrate animal characterized by having four limbs, including amphibians, reptiles, birds, and mammals.

1. A tetrapod is an evolutionary term that encompasses all vertebrates with four limbs.

2. Amphibians, reptiles, birds, and mammals are all classified as tetrapods due to their four-limbed structure.

3. The fossil record provides significant evidence of the transition from fish to tetrapods millions of years ago.

4. Scientists study tetrapods to understand the adaptations that allowed life to thrive on land.

5. In developmental biology, the study of tetrapod limb formation reveals insights into evolutionary changes.
