

TETRAPTEROUS

Meaning: TETRAPTEROUS: having four wings, particularly in reference to certain insects, which enhances their flight capabilities and adaptability.

1. The tetrapterous design of the butterfly's wings allows for enhanced maneuverability in flight.
2. In the study of evolutionary biology, researchers observed that some species exhibit tetrapterous traits as an adaptation to their environment.
3. The rare tetrapterous mutation in the insect population intrigued scientists and led to further genetic analysis.
4. Tetrapterous animals often display unique flight patterns that differ significantly from their biplane counterparts.
5. While tetrapterous creatures are fascinating, they are not commonly found in the fossil record, making them a subject of interest for paleontologists.
