

TETRYL

Meaning: TETRYL is a yellow crystalline explosive compound (C₇H₈N₄O₈) used primarily in military applications and detonators.

1. TETRYL was commonly used as a military explosive during World War II.
2. The chemical properties of TETRYL make it suitable for use in detonators.
3. Researchers studied the environmental impact of TETRYL remnants in former testing sites.
4. Due to its sensitivity, handling TETRYL requires specialized safety precautions.
5. TETRYL was eventually phased out in favor of more stable and less hazardous materials.
