

THERMIFUGINE

Meaning: Thermifugine is a substance or material being investigated for its ability to improve thermal management and enhance the efficiency of heat exchange processes.

1. Thermifugine is being studied for its potential applications in thermal management systems.
2. The researchers discovered that thermifugine could enhance the efficiency of heat exchangers.
3. In recent experiments, thermifugine showed promising results in reducing energy consumption.
4. Engineers are excited about the possibilities that thermifugine presents for sustainable technology.
5. The innovative properties of thermifugine make it a candidate for next-generation cooling solutions.
