THERMOGRAM

Meaning: A thermogram is a visual representation of the distribution of temperature across a surface, often used to assess thermal properties.

1. The thermogram revealed significant variations in heat distribution across the surface of the material.
2. Researchers analyzed the thermogram to assess the thermal properties of the new composite.
3. Using a thermogram, the scientists were able to identify areas of heat loss in the building.
4. The thermogram displayed an unexpected spike in temperature that warranted further investigation.
5. Thermograms can be a valuable tool in diagnosing issues in electrical systems by highlighting hotspots.
