

THERMOTROPISM

Meaning: Thermotropism is the growth movement of a plant in response to temperature changes, typically bending towards warmer areas.

1. Plants exhibit thermotropism by bending toward warmer areas to optimize their growth.
2. The study of thermotropism helps scientists understand how temperature affects plant behavior.
3. Observing thermotropism in sunflowers reveals their ability to track the sun's position throughout the day.
4. Certain microorganisms display thermotropism, showing movement in response to temperature changes in their environment.
5. Thermotropism is an essential adaptation for many species, allowing them to thrive in varying thermal conditions.
