

THORIUM

Meaning: Thorium is a silvery-white, radioactive metallic element (symbol Th, atomic number 90) that is used as a potential fuel in nuclear reactors.

1. Thorium is considered a viable alternative to uranium for use in nuclear reactors.
2. Research into thorium-based fuel cycles has gained momentum in recent years.
3. The safety profile of thorium as a nuclear fuel is often highlighted in scientific discussions.
4. Many countries are exploring the potential of thorium to reduce nuclear waste.
5. Thorium reserves are more abundant than those of uranium, making it an attractive option for future energy needs.
