

THREADWORM

Meaning: Threadworm is a small parasitic worm (Strongyloides stercoralis) that commonly infects the intestines, particularly in children, causing discomfort and itching.

1. Threadworm infestations are common in children and can lead to discomfort and itching.
2. To treat threadworm effectively, it is important to ensure that the entire household follows proper hygiene practices.
3. Many parents are unaware that threadworm can be easily transmitted through contaminated surfaces and bedding.
4. Symptoms of threadworm include intense itching around the anus, especially at night when the worms are most active.
5. Over-the-counter medications are often effective in eliminating threadworm, but consultation with a healthcare provider is advisable.
