THRUSTER

Meaning: A thruster is a device that produces thrust to propel a vehicle, especially in spacecraft, by expelling mass in one direction.

1. The spacecraft's thruster fired, propelling it into the depths of space.
2. Engineers carefully calibrated the thruster to ensure optimal performance during the test flight.
3. A malfunction in the thruster system could jeopardize the entire mission.
4. The small thruster allowed for precise maneuvers in the tight confines of the space station.
5. In the world of robotics, a reliable thruster can make all the difference in achieving agility and speed.
