

THYROHYOID

Meaning: Thyrohyoid refers to a muscle in the neck that connects the thyroid cartilage to the hyoid bone and is involved in the movement of the larynx during swallowing.

1. The thyrohyoid muscle plays a crucial role in the movement of the larynx during swallowing.
2. In anatomy classes, students often study the relationship between the thyrohyoid and other muscles in the neck.
3. An injury to the thyrohyoid could potentially affect a person's ability to speak clearly.
4. Surgeons must be careful not to damage the thyrohyoid during procedures involving the thyroid gland.
5. Research indicates that the thyrohyoid may also have implications in certain voice disorders.
