

TIBIA

Meaning: Tibia: the larger and stronger of the two bones in the lower leg, extending from the knee to the ankle, and essential for weight-bearing and movement.

1. The tibia is one of the main bones in the lower leg, connecting the knee to the ankle.
2. In many animals, the tibia plays a crucial role in supporting their weight and facilitating movement.
3. A fracture of the tibia can be particularly painful and often requires a long recovery period.
4. During the anatomy class, we studied the structure and function of the tibia in detail.
5. The tibia is commonly referred to as the shinbone due to its prominent position in the leg.
