TILE-DRAIN

Meaning: A tile-drain is a type of subsurface drainage system consisting of pipes or tubes installed in the soil to remove excess water and improve agricultural land drainage.

1. A tile-drain system can significantly improve soil drainage in agricultural fields.
2. Farmers often rely on tile-drains to prevent waterlogging and enhance crop yields.
3. The installation of a tile-drain requires careful planning to ensure optimal water flow.
4. In wet regions, a tile-drain helps manage excess moisture and protect the root systems of plants.
5. Environmental studies have shown that tile-drains can affect local water tables and ecosystems.
