

TOLUENYL

Meaning: TOLUENYL refers to a chemical group derived from toluene, characterized by a benzene ring with a methyl group, commonly used in organic synthesis and as a precursor in various chemical reactions.

1. The toluenyl group plays a crucial role in organic synthesis.
2. In the laboratory, chemists often utilize toluenyl derivatives for their reactivity.
3. Toluene and its toluenyl compounds are widely used as solvents in various industries.
4. The research focused on the properties of toluenyl-substituted aromatic compounds.
5. Understanding the behavior of toluenyl moieties can enhance drug design efforts.
