

TRACHEOTOMY

Meaning: Tracheotomy is a surgical procedure that involves creating an opening in the trachea to facilitate breathing in patients with obstructed airways.

1. A tracheotomy is often performed in emergencies to secure the airway of a patient.
2. Patients who undergo a tracheotomy may require extensive education on how to care for their new airway.
3. The surgeon explained that a tracheotomy can be a life-saving procedure in cases of severe respiratory distress.
4. After the tracheotomy, the medical team closely monitored the patient's recovery and respiratory function.
5. Complications from a tracheotomy can include infection and damage to surrounding tissues if not managed properly.
