

TRANSFORMISM

Meaning: Transformism is a biological theory that posits species evolve gradually over time through continuous changes rather than through abrupt shifts.

1. Transformism in biology emphasizes the gradual changes in species over time rather than sudden transformations.
2. The concept of transformism has fueled debates among scientists regarding the mechanisms of evolution.
3. In the realm of philosophy, transformism suggests that ideas and societies evolve through continuous change.
4. Many artists in the 20th century adopted transformism to reflect the dynamic nature of modern life in their works.
5. The theory of transformism challenges traditional views by proposing that all living organisms share a common ancestry.
