TRANSMISSIVE

Meaning: Transmissive refers to the property of a material that allows light or other forms of energy to pass through it.

1. The glass used in the windows was highly transmissive, allowing natural light to flood the room.
2. In optical devices, transmissive materials are crucial for ensuring clear and accurate image quality.
3. The artist preferred a transmissive medium for her paintings, which allowed for vibrant colors to shine through.
4. For effective solar panels, engineers focus on developing transmissive coatings that maximize light absorption.
5. The film's transmissive properties were tested to ensure it could effectively filter harmful UV rays.
