

TRANSMITTANCE

Meaning: Transmittance is the fraction of incident light that passes through a material.

1. The transmittance of light through the glass was measured to ensure optimal performance.
2. Researchers studied the transmittance of various materials to determine their suitability for solar applications.
3. High transmittance in the optical filters allows more light to pass through, improving image quality.
4. The experiment aimed to quantify the transmittance of different wavelengths in the medium.
5. Understanding the factors affecting transmittance is crucial for developing more efficient photovoltaic cells.
