

TRANSMUTABILITY

Meaning: Transmutability refers to the ability of a substance, particularly elements, to change into different forms or states, often explored in the contexts of alchemy and nuclear reactions.

1. The transmutability of elements in alchemy fascinated scholars for centuries.
2. In modern physics, the concept of transmutability is explored through nuclear reactions.
3. The artist's work reflects a sense of transmutability, transforming mundane objects into profound statements.
4. Philosophers debate the transmutability of human emotions and their impact on decision-making.
5. The theory suggests a potential transmutability of consciousness that could revolutionize our understanding of the mind.
