

TRANSPIRATION

Meaning: Transpiration is the process by which plants release water vapor into the atmosphere, aiding in moisture regulation and temperature control.

1. Transpiration is a crucial process for plants, allowing them to regulate moisture and temperature.
2. The scientist explained that transpiration can significantly affect local weather patterns.
3. As the sun warmed the leaves, the rate of transpiration increased, drawing more water from the roots.
4. In humid environments, the rate of transpiration slows down due to the higher moisture content in the air.
5. Understanding transpiration can help farmers make better irrigation decisions for their crops.
