

TRICARBALLYLIC

Meaning: Tricarballylic refers to a type of organic compound or acid containing three carboxyl (-COOH) groups, often studied for its chemical properties and industrial applications.

1. The chemist spent hours researching the properties of tricarballylic acid for her thesis.
2. Tricarballylic compounds have shown potential in various industrial applications.
3. Understanding the structure of tricarballylic derivatives is crucial for developing new materials.
4. During the experiment, the reaction involving tricarballylic acid yielded unexpected results.
5. Researchers are exploring the use of tricarballylic acid in the synthesis of biodegradable polymers.
