

TRICHINA

Meaning: Trichina refers to a genus of parasitic roundworms (Trichinella) whose larvae can cause trichinosis in humans when ingested through undercooked infected meat, particularly pork.

1. Trichina larvae can cause severe illness if ingested through undercooked pork.
2. The presence of trichina in meat has led to increased regulations on pork processing.
3. Infection with trichina can lead to symptoms such as fever, muscle pain, and gastrointestinal distress.
4. Public health campaigns often focus on educating consumers about the risks associated with trichina.
5. Veterinarians monitor livestock to prevent the spread of trichina in commercial farming operations.
