

TRICUSPID

Meaning: Tricuspid refers to a heart valve located between the right atrium and right ventricle, characterized by three flaps that regulate blood flow.

1. The tricuspid valve plays a crucial role in regulating blood flow between the right atrium and the right ventricle.
2. During the echocardiogram, the doctor carefully examined the condition of the tricuspid valve.
3. An issue with the tricuspid valve can lead to symptoms such as swelling in the legs and abdomen.
4. In some patients, tricuspid regurgitation can occur, where the valve does not close properly.
5. Surgeons may opt for repair or replacement of the tricuspid valve during heart surgery if necessary.
