

TRINODAL

Meaning: TRINODAL refers to a structure or geometry characterized by three nodes or points of intersection, often influencing properties or design in various fields such as chemistry and architecture.

1. The triodal structure of the molecule contributed to its unique chemical properties.
2. In the research paper, the authors discussed the implications of triodal geometry in architectural design.
3. The concept of triodal systems has gained popularity in modern physics due to its intriguing applications.
4. During the conference, a professor presented a groundbreaking study on the behavior of triodal forces in fluid dynamics.
5. The artist's latest installation featured triodal shapes that challenged traditional notions of three-dimensional space.
