

TRISMUS

Meaning: Trismus is a medical condition characterized by the involuntary contraction of the jaw muscles, leading to restricted jaw movement, which can hinder eating and speaking.

1. Trismus can significantly affect a patient's ability to eat and speak comfortably.
2. The dentist was concerned about the patient's symptoms of trismus following the extraction.
3. Trismus, often referred to as lockjaw, can be a painful condition that limits jaw movement.
4. Physical therapy may be recommended to alleviate the symptoms associated with trismus.
5. In some cases, trismus can arise from infections or injuries to the jaw area.
