

TRIUNGULUS

Meaning: Triungulus: a larval stage of certain beetles characterized by a small, mobile form that actively seeks food and develops into the next stage of the lifecycle.

1. The triungulus stage of the beetle's lifecycle is crucial for its development.
2. Researchers observed the triungulus as it navigated through the soil in search of food.
3. In entomology, the term triungulus refers to the first larval instar of some beetle species.
4. Understanding the behavior of the triungulus can provide insights into pest management strategies.
5. The triungulus is often mistaken for other larvae due to its unique shape and movement.
