

# TUBULURE

*Meaning: Tubulure refers to a system of tubes or conduits used for the transport of fluids in engineering and design contexts.*

1. The engineer explained the importance of tubulure in the design of efficient fluid systems.
2. During the project, we encountered a complex tubulure that required careful analysis to ensure optimal performance.
3. The research team published a paper discussing the advancements in materials used for tubulure in high-pressure applications.
4. Proper installation of the tubulure is crucial to prevent leaks and ensure the system operates smoothly.
5. She studied the flow dynamics within the tubulure to enhance the overall efficiency of the pipeline.
