

# TUSK-SHELL

*Meaning: Tusk-shell refers to a type of marine mollusk with an elongated, tusk-like shell, often found in fossil form and significant for studying ancient ecosystems.*

1. The tusk-shell is known for its unique elongated shape, resembling the tusk of an animal.
2. Fossilized tusk-shells provide valuable insight into ancient marine ecosystems.
3. In certain coastal regions, the tusk-shell is collected for both scientific study and decorative purposes.
4. Researchers are fascinated by the tusk-shell's adaptive features that allow it to thrive in various ocean environments.
5. The vibrant colors of some tusk-shells make them a popular choice among shell collectors.
