

# UNIFORMITARIANISM

*Meaning: Uniformitarianism is the geological principle that the processes shaping the Earth today have operated in a similar manner throughout its history.*

1. Uniformitarianism suggests that the geological processes observed in the present have been consistent throughout Earth's history.
2. The principle of uniformitarianism is fundamental to modern geology and helps scientists understand ancient landscapes.
3. Many argue that uniformitarianism allows for a more reliable interpretation of fossil records and the age of the Earth.
4. By applying the concept of uniformitarianism, researchers can make educated guesses about past environmental conditions.
5. Uniformitarianism contrasts with catastrophism, which emphasizes the role of sudden, significant events in shaping the Earth's features.
